PT Compositions that bind neural cell adhesion molecules useful for treating  
PT disorders of the nervous system and muscles e.g. Alzheimer's and  
PT Parkinson's diseases.  
XX  
PS Example 4; Page 25; 119pp; English.  
XX  
CC Neural cell adhesion molecule (NCAM) is a cellular adhesion molecule.  
CC NCAM is found in three forms, two of which are transmembrane forms, while  
CC the third is attached via a lipid anchor to the cell membrane. All three  
CC NCAM forms have an extracellular structure consisting five immunoglobulin  
CC domains (Ig domains). The Ig domains are numbered 1 to 5 from the N-  
CC terminal. The present sequence represents a peptide which binds to the  
CC NCAM Ig1 domain. The peptide can be used in a compound which binds to  
CC NCAM-Ig1/Ig2 domains, and is capable of stimulating or promoting neurite  
CC outgrowth from NCAM presenting cells, and is also capable of promoting  
CC the proliferation of NCAM presenting cells. The compound may be used in  
CC the treatment of normal, degenerated or damaged NCAM presenting cells.  
CC The compound may in particular be used to treat diseases of the central  
CC and peripheral nervous systems such as post operative nerve damage,  
CC traumatic nerve damage, impaired myelination of nerve fibres, conditions  
CC resulting from a stroke, Parkinson's disease, Alzheimer's disease,  
CC dementias, sclerosis, nerve degeneration associated with diabetes  
CC mellitus, disorders affecting the circadian clock or neuro-muscular  
CC transmission and schizophrenia. Conditions affecting the muscles may also  
CC be treated with the compound, such as conditions associated with impaired  
CC function of neuromuscular connections (e.g. genetic or traumatic shock or  
CC traumatic atrophic muscle disorders). Conditions of the gonads, pancreas  
CC (e.g. diabetes mellitus types I and II), kidney (e.g. nephrosis), heart,  
CC liver and bowel may also be treated using the compound. The compound is  
CC used in a prosthetic nerve guide, and also to stimulate the ability to  
CC learn, and to stimulate the memory of a subject

PT Use of a compound comprising a peptide of neural cell adhesion molecule,

PT in the preparation of medicament for preventing death of cells presenting

PT NCAM or NCAM ligand and treating central nervous system diseases.

XX

PS Disclosure; Page 16; 57pp; English.

XX

CC The invention relates to use of a compound (I) comprising a peptide which

CC comprises at least 5 contiguous amino acid residues of a sequence of the

CC neural cell adhesion molecule (NCAM), its fragment, variant or its mimic,

CC for the preparation of a medicament for preventing death of cells

CC presenting the NCAM or an NCAM ligand. (I) is useful in the preparation  
 CC of a medicament for preventing death of cells presenting the NCAM or an  
 CC NCAM ligand. The medicament is for the stimulation of the survival of  
 CC heart muscle cells, such as survival after acute myocardial infarction.  
 CC The medicament is for the treatment of diseases or conditions of the  
 CC central and peripheral nervous system, such as postoperative nerve  
 CC damage, traumatic nerve damage, e.g. resulting from spinal cord injury,  
 CC impaired myelination of nerve fibres, postischaemic damage, e.g.  
 CC resulting from a stroke, multiinfarct dementia, multiple sclerosis, nerve  
 CC degeneration associated with diabetes mellitus, neuro-muscular  
 CC degeneration, schizophrenia, Alzheimer's disease, Parkinson's disease and  
 CC Huntington's disease. The medicament is for the treatment of diseases or  
 CC conditions of the muscles including conditions with impaired function of  
 CC neuro-muscular connections, such as genetic or traumatic atrophic muscle  
 CC disorders, and for the treatment of diseases of conditions of various  
 CC organs, such as degenerative conditions of the gonads, pancreas (e.g.  
 CC diabetes mellitus type I and II) and kidney (e.g. nephrosis). ABG69329-  
 CC ABG69352 represent human NCAM peptides of the invention

 XX  
 CC Promega peptide 5 is tagged with dansyl at residue 1 and may be used in a  
 CC novel non-radioactive method of quantitating the presence or activity of  
 CC an enzyme. The method can be used for rapid, specific and highly  
 CC sensitive detection of enzymes such as protein kinases, phosphatases and  
 CC proteases, esp. in this case protein kinase C. They can be used to study  
 CC enzyme function in metabolism and in diagnosis of disease. They also  
 CC allow quantitative determ. of the enzyme's activity. See also AAR37426-  
 CC 36. (Updated on 25-MAR-2003 to correct PN field.)

 PT New cyclic peptide(s) which bind to neurotrophin receptor and mimic or  
 PT inhibit neurotrophin activity - useful e.g. for inhibiting neurite  
 PT outgrowth or treating nervous system disease, tumours, etc.  
 XX  
 PS Claim 9; Page 32; 42pp; English.  
 XX  
 CC The peptides AAR83760-80 are examples of peptides that bind to the  
 CC neurotrophin receptor under physiological conditions in vivo or in vitro.  
 CC The peptides are structural analogs of nerve growth factor (NGF) and  
 CC contain at least one beta turn (from region 28-36, 43-49 or 91-98) or 3  
 CC consecutive reverse turns (from region 59-65). The peptides may be  
 CC cyclised by oxidn. of Cys or other cyclisation procedure and may be  
 CC linked to a tracer e.g. a metal chelate or radionuclide. The peptides may  
 CC contain uncharged or hydropathic amino acids at the N- and C-termini,  
 CC which are optionally protected by an Fmoc or acetyl protecting group. The  
 CC peptides are useful for inhibition of neurotrophin, esp. for inhibiting  
 CC neurite outgrowth, treating central or peripheral nervous system disease,  
 CC tumours and neuromas, for mapping hormone-receptor interaction sites and  
 CC receptor domain-function correlation and for immunisation. This peptide  
 CC is derived from residues 29-35 with a substitution of residue 30 Asp for  
 CC Ala, and contains a beta turn

PT Non:radioactive assay for measuring enzyme activity - involving  
PT electrophoretic sepn. of labelled cleavage prod. from labelled peptide  
PT substrate.  
XX  
PS Claim 5; Col 39-40; 35pp; English.  
XX  
CC AAW09653 is a peptide substrate used in a non-radioactive assay for  
CC measuring enzyme activity. The assay comprises incubating the enzyme with  
CC the labelled peptide substrate to form a labelled peptide product;  
CC separating the product from the substrate by agarose gel electrophoresis  
CC and measuring the amount of product by detecting the label by  
CC fluorescence or chemiluminescence. The assay can be performed rapidly and  
CC with great sensitivity. This peptide is especially for determining  
CC protein kinase C activity, e.g. to study its function in metabolism or to  
CC screen for potential inhibitors. (Updated on 25-MAR-2003 to correct PF  
CC field.)

 PT Non-crosslinked protein particles for therapeutic and diagnostic use.  
 XX  
 PS Example 22; Col 77-78; 65pp; English.  
 XX  
 CC This invention describes a novel aqueous suspension of monodisperse  
 CC particles on non-crosslinked, non-denatured albumin (50-5000 nm) which is  
 CC stable against dissolving upon dilution with an alcohol-free aqueous  
 CC medium. The method involves (a) forming an aqueous solution containing  
 CC albumin and hemoglobin and (b) treating the aqueous solution with an  
 CC alcohol to cause the solution to become turbid. The particles are useful  
 CC as agents for in vivo administration, either of their own administration  
 CC or as a vehicle for other therapeutic or diagnostic agents. The method  
 CC permits the formation of albumin and hemoglobin particles in the  
 CC nanometer and micrometer size range, in a form closer to their natural  
 CC form than the forms of the prior art. The particles therefore constitute  
 CC a more closely controlled agent for in vivo administration, with greater  
 CC ease of clearance from the body after their period of usefulness.  
 CC AAY30952-Y31135 represent peptides used in the method of the invention

 PT New linear epitope(s) for human auto-antibodies - from the Ro/SSA, La/SSB  
 PT and Sm B/B' antigens and ribo:nucleoprotein, used for diagnosing and  
 PT treating auto-immune disorders e.g. systemic lupus erythematosus.  
 XX  
 PS Claim 1; Page 31; 43pp; English.  
 XX  
 CC The sequences given in AAR43391-562 are linear epitopes which are derived  
 CC from the 60 kD Ro/SSA peptide, the La/SSB autoantigen, the 70 kD nuclear  
 CC ribonucleoprotein (nRNP) and the Sm B/B' polypeptide. These antigens are  
 CC common in systemic lupus erythematosus (SLE) and closely related  
 CC disorders. The Ro/SSA family of proteins has been shown to have several  
 CC molecular forms which are defined by the molecular weight of the antigen  
 CC identified. The major form has a molecular weight of 60 kD and two  
 CC additional forms have molecular weights of 52 and 54 kD. La/SSB is also a  
 CC member of this group of autoantibodies and binds small RNAs with a  
 CC polyuridine terminus. La/SSB is bound by a third of the anti-Ro/SSA  
 CC precipitin positive sera. La/SSB has been shown to be a 46-50 kD  
 CC monomeric phosphoprotein which associates with RNA polymerase III  
 CC transcripts. Anti-Sm antibodies precipitate snRNPs containing the U1, U2,  
 CC U4/U6 and U5 RNA. Anti-Sm antibodies may be directed against one or a  
 CC combination of the polypeptides: B (26 kD), B' (27 kD), D (13 kD), E/F  
 CC (11 kD doublet) and G (less than 10 kD). These epitopes may be used for  
 CC preventing, treating or screening autoimmune disorders, especially SLE or  
 CC Sjogrens syndrome (SS). They bind to a human autoantibody and may  
 CC therefore be used as vaccines. (Updated on 25-MAR-2003 to correct PN  
 CC field.)

CC AAR64591-623 are peptide derivatives of a 37 mer RF-1 peptide derived  
CC from respiratory syncytial virus (RSV) (AAR64590) which have been  
CC truncated at the amino terminus. The peptides are DP-178 like peptides.  
CC DP-178 corresponds to amino acids 638 to 673 of the HIV-1 isolate LAI  
CC transmembrane protein gp41. It forms a putative alpha helix at the C-  
CC terminal end of the gp41 ectodomain, and complexes with DP-107  
CC (corresponds to amino acids 558-595) which contains a leucine zipper  
CC motif. The peptides complex via non-covalent protein-protein

CC interactions. The peptide derivatives were identified by a computer  
CC assisted peptide sequence search. The antiviral activity of this peptide  
CC is not stated in the specification. (Updated on 25-MAR-2003 to correct PN  
CC field.)

CC The present sequence is a cleavage product from the IgaP domain of the  
CC precursor of IgA-protease polyprotein (IPP) of Neisseria gonorrhoeae  
CC strain MS11. The Neisseria IPP has marked homology to certain human  
CC proteins and has been implicated in rheumatoid arthritis and other auto-  
CC immune diseases. The polyprotein also activates proviruses, including  
CC HIV. Substances which interfere with the function of IPP from Neisseria  
CC will be useful for treating associated autoimmune diseases and viral  
CC infections. The present peptide is homologous to human laminin b2.

 XX  
 PS Claim 14; Page 41; 78pp; English.  
 XX  
 CC This sequence represents a peptide which binds adjacent to the calmodulin  
 CC binding site of neuronal nitric oxide synthase (NNOS). This peptide is  
 CC used in a novel method which identifies an agent which inhibits nitric  
 CC oxide synthase (NOS) by blocking calmodulin (CAM) activation of the NOS.  
 CC Such agents which modulate NOS activity can be used to treat a disease or  
 CC condition associated with nitric oxide production. Agents which inhibit  
 CC neuronal NOS (NNOS) can be used to prevent brain damage in conditions  
 CC involving cerebral ischaemia or reperfusion injury, such as head trauma.  
 CC Agents which decrease the activity of inducible NOS (INOS) can be used to  
 CC treat a condition modulated by production of NO by INOS, such as septic  
 CC shock, toxic shock, autoimmune disease such as rheumatoid arthritis,  
 CC inflammatory conditions such as inflammatory bowel disease, multiple  
 CC sclerosis, diabetes, or to combat dementia, immune system destruction,  
 CC and/or physical deterioration in individuals infected with the AIDS  
 CC virus. Agents which activate INOS can be used to treat disease relating  
 CC to dysplasia, cancer, or infectious disease. Activation of INOS can  
 CC produce cytotoxic levels of NO which would aid in the elimination of  
 CC dysplastic or cancerous tissue, or aid in the control of infectious  
 CC agents such as viruses, microbes, or other parasites. Agents which  
 CC increase the activity of endothelial NOS (ENOS) can be used to treat a  
 CC condition modulated by production of NO by ENOS such as hypertension,  
 CC atherosclerosis or acute asthma. An agent which activates ENOS or NNOS in  
 CC the corpus cavernosa can be used for treating male erectile dysfunction.  
 CC The products and methods can also be used for detection and drug  
 CC screening. (Updated on 17-OCT-2003 to standardise OS field)

PT Detecting papilloma virus infection using molecule binding to E4 protein

PT - useful, e.g. in screening for pre-cancerous cervical lesions and to

PT determine type(s) of human papilloma virus infecting human patients.

XX

PS Example 2; Page 17; 52pp; English.

XX

CC A new method has been developed for detecting a papilloma virus infection

CC in an organism. The method comprises: (i) obtaining a sample of cells

CC from the potential infection site; (ii) contacting the cells with a

CC molecule binding specifically to papilloma virus E4 protein, and (iii)

CC monitoring the binding. The method is useful to detect papilloma virus

CC infections in organisms (especially mammals) and especially HPV

CC infections (e.g. with HPV16, 18, 33, 35, 45, 51, 56, 58 or 61) in humans.

CC Papilloma viruses cause epithelial tumours in humans varying in severity

CC depending on the infection site and HPV type involved. The method is

CC particularly useful to determine papilloma infection in the mammalian

CC cervix and especially to screen for pre-cancerous cervical lesions in

CC humans, since over 90% of cervical carcinoma patients show cervical HPV

CC infection. It is also useful to determine the type(s) of HPV infection in  
CC a patient, by using a molecule binding specifically to a subset of HPV E4  
CC proteins. This is important, since progression to malignant disease (and  
CC hence clinical prognosis) is dependent on HPV type. Molecules capable of  
CC binding E4 are also useful to target anticancer/antiviral agents capable  
CC of destroying papilloma viruses and/or papilloma virus-infected cells.  
CC The present sequence represents a synthetic immunoglobulin TVG 405 light  
CC chain CDR3 peptide, from an example of the present invention

PT Diagnosing disease by detecting frameshift mutations in RNA or

PT corresponding protein mutations - used to diagnose cancer and  
PT neurological diseases, particularly Alzheimer's disease, and also for  
PT treatment and prevention with specific ribozymes or wild-type RNA.

XX

PS Disclosure; Fig 6; 258pp; English.

XX

CC This invention describes a novel method for the diagnosis of a disease  
CC caused by, or associated with, an RNA molecule that has a frameshift  
CC mutation. The method is used to diagnose age-related diseases, especially  
CC cancer and a wide range of neurodegenerative disorders (e.g. Alzheimer's  
CC disease, Down's syndrome, myotonic dystrophy, Huntington's disease,  
CC multiple sclerosis, alcoholic liver disease, diabetes mellitus type II  
CC and many others listed) or susceptibility to these disorders. The method  
CC allows a definitive diagnosis of Alzheimer's disease in living patients,  
CC at an early stage. It is based on the observation that disease may be  
CC caused by mutations in RNA rather than DNA. The invention describes the  
CC use of neuronal system RNA molecules, specifically proteins including  
CC beta-amyloid precursor protein (beta-APP), the microtubule associated  
CC proteins Tau and Big Tau, ubiquitin B, apolipoprotein E, microtubule  
CC associated protein 2 (MAP2), neurofilament-L, neurofilament-M,  
CC neurofilament-F, presenilin I, presenilin II, glial fibrillary acidic

 PT Oligopeptide interacting with human IgE Fc epsilon receptor - useful in  
 PT anti-allergy treatment as competitors of human IgE for Fc epsilon  
 PT receptor to block development of Type I hypersensitivity.  
 XX  
 PS Claim 1; Page 3; 45pp; English.  
 XX  
 CC The sequences AAW61162-W61166 are IgE derived oligopeptides which  
 CC interact with the human IgE Fc epsilon receptor. This particular  
 CC oligopeptide is the core minimal region of IgE required for interaction  
 CC with these Fc epsilon receptors and can thus bind both high and low  
 CC affinity receptors. The peptide was derived from a region of the epsilon  
 CC heavy chain of IgE, and can therefore mimic and block human IgE binding  
 CC to the Fc receptors. This sequence was used as the core sequence in the  
 CC other oligopeptides that were derived, they varied in length and at their  
 CC N and C terminal end. The IgE protein forms a loop structure naturally,  
 CC thus the addition of Cysteine residues at both ends of this sequence  
 CC enables disulphide bonds to form which results in a loop structure. These  
 CC oligopeptides are small and are thus easy to synthesise and deliver, they  
 CC are stable, highly active in anti-allergy treatment and lastly are less  
 CC likely to trigger an adverse anaphylatic immune response. The  
 CC oligopeptides can be used as competitors of human IgE for the Fc epsilon  
 CC receptor in anti-allergy treatment. Human IgE mediates Type I  
 CC hypersensitivity, an allergic response producing symptoms such as hay  
 CC fever and asthma. Thus the oligopeptides can be used to block the  
 CC development of type I hypersensitivity

XX  
PS Claim 70; Page 61; 69pp; English.

XX  
CC This sequence is a specifically claimed example of new nociceptin  
CC analogue peptides which have the generic formula (X)n-A1-A2-A3-A4-A5- A6-  
CC A7-A8-A9-A10-A11-A12-A13-A14-A15-A16-A17-(Y)m-A18, in which: A1 is  
CC absent, a small or lipophilic amino acid, or phenylpropionic acid,  
CC optionally acylated; A2 = aromatic, lipophilic or small amino acid,  
CC optionally acylated if A1 is absent; A3, A6 and A7 = small, lipophilic or  
CC polar amino acids; A2-A3 may alternatively be 5-amino-pentanoic, N-  
CC methylantranilic, 4-aminocyclohexane carboxylic or 3-aminomethyl-  
CC benzoic acid; A4 = small, polar or aromatic amino acid; alternatively A3-  
CC A4 = N-methylantranilic acid; A5, A9, A10 and A11 = lipophilic or polar  
CC amino acids; A8 = polar amino acids or D- or L-Ala; A12, A13, A14 and A15  
CC = polar or lipophilic amino acids or may be absent; A16 and A17= small or  
CC polar amino acids or may be absent; A18 = hydroxy or amino; X and Y =  
CC polar, lipophilic, aromatic or small amino acids; n + m = 0-82; and two  
CC or more of A1-A17, X and Y may be cyclisation amino acids, forming one or  
CC more bridges (disulphide, lactam or Gly-lactam); provided that the  
CC peptide has (a) at least two amino acids modifications relative to the  
CC nociceptin sequence or (b) an unnatural amino acid at position A1. These  
CC peptides are useful for treatment and prevention of vasomotor disorders,  
CC specifically hot flushes in menopausal women. They can also be used for

CC antagonising the physiological effects of opioids and for treating  
CC diseases related to hyperalgesia, neuroendocrine secretion, stress,  
CC locomotor activity, anxiety, instinctive behaviour, and decrease in  
CC learning, memory, curiosity, attention and/or sensory perception

PT vaccines.

XX

PS Example 6; Page 112; 128pp; English.

XX

CC The present invention describes a conjugate (A) comprising a  
CC strategically modified hepatitis B core (HBc) protein (I) attached to a  
CC hapten, where (I) includes amino acids (aa) 10-140 of the wild type HBc  
CC 183 aa sequence (given in AAY29674) and additionally has an insert (II)

CC in the region corresponding to aa's 50-100, where the insert is of 1 to  
CC about 40 aa's and contains a chemically reactive aa residue linked to the  
CC hapten. A vaccine containing (A), optionally in the form of particles, is  
CC used to induce a protective antibody response against the pathogen from  
CC which the hapten is derived, in humans or other animals. These pathogens  
CC may be bacteria, viruses, rickettsia or protozoa. Insertion of (II)  
CC overcomes the low reactivity of aa side chains in native HBc protein,  
CC increasing the reactivity with hapten and resulting in conjugates of  
CC improved immunogenicity. Modified HBc can be derivatised in the form of  
CC particles by well-defined chemical methods, and is unlikely to cause  
CC immunological side-effects. The present sequence represents a modified  
CC HBc fragment, having a lysine insertion, from the present invention

PT New immunogenic peptides with HLA binding motif, useful in treatment and  
PT diagnosis of cancers and viral diseases.  
XX  
PS Claim 1; Page 116; 150pp; English.  
XX  
CC AAY45390 to AAY48214 represent specifically claimed immunogenic peptides  
CC having a human major histocompatibility complex (MHC) Class I (also known  
CC as human leukocyte antigen (HLA)) binding motif. The immunogenic peptides  
CC can bind to a specific HLA allele (i.e. HLA-A subtypes HLA-A2.1, A1, A3.2  
CC or A24.1 or HLA-B or C) and induce a cytotoxic T cell response against  
CC the antigen from which the peptide is derived. Cytotoxic T lymphocytes  
CC (CTLs) which destroy antigen-bearing cells are normally induced by an  
CC antigen in the form of a peptide fragment bound to a HLA molecule, rather  
CC than the intact foreign antigen itself, and are particularly important in  
CC tumour rejection and in fighting viral infections. The peptides are  
CC therefore useful therapeutically to treat or prevent viral infections and  
CC cancers in mammals (especially humans) e.g. prostate cancer, hepatitis B  
CC and C, AIDS, and renal carcinoma. They can be administered as vaccines to  
CC elicit an immune response in individuals susceptible or otherwise at risk  
CC of viral infection or cancer, or used to treat chronic or acute  
CC conditions. They are also useful diagnostically, and can be used to  
CC induce a cytotoxic T cell response, by contacting a cytotoxic T cell with  
CC the peptide e.g. to produce CTLs ex vivo for infusion back into a  
CC patient. The polynucleotides encoding the immunogenic peptides are also  
CC useful therapeutically and for immunisation as above

 PT tract and related nucleic acid - chimaeras and antibodies, used to  
 PT deliver therapeutic or diagnostic agents to, or through, the  
 PT gastrointestinal tract, e.g. insulin or leuprolide.  
 XX  
 PS Claim 18; Page 236; 294pp; English.  
 XX  
 CC This sequence represents a fragment of a protien of the invention. The  
 CC invention relates to purified proteins (I) that bind specifically to at  
 CC least one of the gastro-intestinal (GI) tract receptors human intestinal  
 CC peptide-associated transporter (HPT1), hPEPT1, D2H and human sucrose-  
 CC isomaltase complex (hSI). (I) provide active transport of therapeutic  
 CC agents through human and animal GI tissue (into the blood) for in vivo  
 CC delivery, particularly for treatment or prevention of hypertension,  
 CC diabetes, osteoporosis, haemophilia, anaemia, cancer, migraine, or angina  
 CC pectoris. Specifically they are used to deliver insulin or leuprolide,  
 CC but many other suitable therapeutic agents are disclosed, including genes  
 CC or inhibitory nucleic acid, imaging agents and antigens. (I) may also  
 CC provide targeting to the GI tract. Other uses of (I) are: (i) to  
 CC determine the level of specified receptors in a sample (in a binding  
 CC assay); and (ii) to screen for molecules that bind (I). Immunogenic  
 CC analogues or derivatives of (I) are used to raise antibodies and in  
 CC immunoassays. The antibodies are used to locate, detect and measure (I),  
 CC e.g. for imaging, monitoring treatment, tissue analysis etc., also for  
 CC peptide purification and immobilisation

XX

CC This sequence represents a fragment of a secreted human protein encoded  
CC by the nucleic acid molecule detailed in the descriptor line. The gene  
CC can be used to generate fusion proteins by linking to the gene to a human  
CC immunoglobulin Fc portion (e.g. AAX27302) for increasing the stability of  
CC the fused protein as compared to the human protein only. The invention  
CC relates to 123 novel genes and their fragments (nucleic acid sequences:  
CC AAX27311-X27449; amino acid sequences AAY02650-Y02788) which are useful  
CC for preventing, treating or ameliorating medical conditions e.g. by  
CC protein or gene therapy. Also, pathological conditions can be diagnosed  
CC by determining the amount of the new polypeptides in a sample or by  
CC determining the presence of mutations in the new polynucleotides.  
CC Specific uses are described for each of the 123 polynucleotides, based on  
CC which tissues they are most highly expressed in (see AAX27311 for  
CC described uses)

 PT A new hybrid polypeptide with enhanced pharmacokinetic properties  
 PT comprises enhancer sequence.  
 XX  
 PS Disclosure; Page 34; 124pp; English.  
 XX  
 CC The invention relates to hybrid polypeptides comprising enhancer peptide  
 CC sequence linked to core polypeptides. The enhancer polypeptides are  
 CC derived from various retroviral envelope (gp41) protein sequences,  
 CC especially from HIV-1, HIV-2 and SIV. The enhancer peptides enhance the  
 CC pharmacokinetic properties such as increasing the half-life of any core  
 CC polypeptide that they are linked to. The core polypeptides are any  
 CC polypeptide that may be introduced into a living system and that can  
 CC function as a pharmacologically useful peptide for the treatment or  
 CC prevention of a disease. The core polypeptides are bioactive peptides  
 CC selected from a growth factor, cytokine, differentiation factor,  
 CC interleukin, interferon, colony stimulating factor, hormone or angiogenic  
 CC factor. The peptides of the invention can be used for inhibiting viral  
 CC infection and can be used in anti-viral and anti-fusogenic treatments.  
 CC Sequences AAY88651-Y90055 represent core polypeptide fragments that can  
 CC be used in the invention. Some sequences among those indicated also  
 CC comprise enhancer fragments at terminal ends and form hybrid polypeptides

PT side.  
XX  
PS Example 2; Page 9; 11pp; Japanese.  
XX  
CC This sequence represents a peptide recognised and cleaved by asparagine  
CC protease. The invention relates to a quick assay method for asparagine  
CC protease of plant origin. The asparagine protease specifically recognises  
CC asparagine residues and cleaves proteins at the C-terminal end of the  
CC asparagine residue. The assay uses a fluorescence substrate (which has  
CC quenching properties) which distributes a 7-methoxy coumarin-4-yl-acetyl  
CC group to the amino group of the glycine residue at the N-terminal side,  
CC and a 2,4-dinitrophenyl group to the C-terminal of an amino acid  
CC sequence. The fluorescence caused by the fluorescence substrate is not  
CC connected to the asparagine residue and can be measured after cleavage by  
CC the protease. The method is useful for assaying asparagine proteases of  
CC plant origin. The activity of the protease can be determined within a  
CC short time period and the enzyme activity can be measured with high  
CC sensitivity using the fluorescence substrate. The procedure is quick even  
CC when materials which inhibit other protease and fluorescence are included  
CC in the sample

PT Quick assay method of specific end protease activity of asparagine  
PT residue of plant origin, involves distributing 7-methoxy phosphorous 4-yl  
PT -acetyl and 2,4-dinitrophenyl group to N-terminal side and C-terminal  
PT side.

XX

PS Claim 1; Page 9; 11pp; Japanese.

XX

CC This sequence represents a peptide recognised and cleaved by asparagine  
CC protease. The invention relates to a quick assay method for asparagine  
CC protease of plant origin. The asparagine protease specifically recognises  
CC asparagine residues and cleaves proteins at the C-terminal end of the  
CC asparagine residue. The assay uses a fluorescence substrate (which has  
CC quenching properties) which distributes a 7-methoxy coumarin-4-yl-acetyl  
CC group to the amino group of the glycine residue at the N-terminal side,  
CC and a 2,4-dinitrophenyl group to the C-terminal of an amino acid  
CC sequence. The fluorescence caused by the fluorescence substrate is not  
CC connected to the asparagine residue and can be measured after cleavage by  
CC the protease. The method is useful for assaying asparagine proteases of  
CC plant origin. The activity of the protease can be determined within a  
CC short time period and the enzyme activity can be measured with high  
CC sensitivity using the fluorescence substrate. The procedure is quick even  
CC when materials which inhibit other protease and fluorescence are included  
CC in the sample

 PT New angiogenesis-inhibiting protein receptors, useful in methods for  
 PT treating diseases and processes that are mediated by angiogenesis, such  
 PT as solid tumors, psoriasis, scleroderma and myocardial angiogenesis.  
 XX  
 PS Claim 1; Page 35; 100pp; English.  
 XX  
 CC This invention relates to angiogenesis-inhibiting protein receptors, and  
 CC the DNA sequences encoding them. Angiogenesis is the generation of new  
 CC blood vessels into a tissue, and normally occurs in wound healing, foetal  
 CC and embryonal development and the formation of the corpus luteum,  
 CC endometrium and placenta. Angiostatin is a protein (see AAB16450 and  
 CC AAA68202) involved in angiogenesis, and has an amino acid sequence  
 CC similar to that of a plasminogen fragment (see murine plasminogen  
 CC AAB16490). Angiostatin has the ability to inhibit angiogenesis.  
 CC Endostatin is also an angiogenesis inhibiting protein (see AAB16451 and  
 CC AAA68203). Sequences AAA68242 and AAB16522 represent coding and protein  
 CC sequences of human laminin. Laminin is an angiostatin binding protein,  
 CC and some of the peptides of the invention share homology with regions of  
 CC laminin. Peptides AAB16452-B16521 (excluding AAB16490) are the  
 CC angiogenesis-inhibiting protein receptor fragments of the invention. The  
 CC peptides bind either angiostatin or endostatin and can be used in methods  
 CC for treating diseases and processes that are mediated by angiogenesis,  
 CC such as solid tumours, psoriasis, scleroderma, myocardial angiogenesis,  
 CC Crohn's disease, cerebral collaterals, arteriovenous malformations,  
 CC rubeosis, diabetic retinopathy, arthritis, wound healing, peptic ulcers,  
 CC Helicobacter related diseases, fractures, placentation and cat scratch  
 CC fever. They are useful for the detection and prognosis of cancer. DNA  
 CC sequences A628204-A628241 encode the peptides of the invention

 PT New heat-stable polymerase from ISS1/1, useful for amplification of,  
 PT labeling and extending nucleic acids, has 3'-5'- but not 5'-3'-  
 PT exonuclease activity.  
 XX  
 PS Example 8; Page 11; 40pp; German.  
 XX  
 CC This invention describes a novel heat-stable polymerase (I), from ISS1/1  
 CC which is homologous to PolI of Escherichia coli, that has 3'-5'-  
 CC exonuclease activity but lacks 5'-3'-exonuclease activity. (I), and their  
 CC mutated/modified forms with reduced 3'-exonuclease activity, are used for  
 CC labeling, amplifying and extending nucleic acids, especially in  
 CC polymerase chain reactions, but also e.g. for nick translation and for  
 CC random-priming labeling reactions. Mutation of (I) allow its 3'-5'-  
 CC exonuclease activity, very strong in the native enzyme, to be adjusted to  
 CC suit particular applications, while retaining its high processivity  
 CC (which can be increased further when used with associated proteins). (I)  
 CC can generate very long (over 2 kb) amplicons, which requires only small  
 CC amounts of template sequences, and reduces accumulation of errors. This  
 CC sequence represents an N-terminal fragment of the insertion sequence  
 CC ISS1/1 polymerase described in the method of the invention

 PT Protein transduction system for treating cancer and pathogenic infections  
 PT has a fusion protein comprising a protein transduction domain covalently  
 PT linked to a cytotoxic domain.  
 XX  
 PS Claim 66; Page 98; 127pp; English.  
 XX  
 CC AAY93542-51 represent synthetic protein transduction domains, which are  
 CC used in the protein transduction system of the invention. The  
 CC specification describes a protein transduction system, which comprises a  
 CC fusion protein. This fusion protein has a covalently linked protein  
 CC transduction domain and cytotoxic domain. The system is useful for  
 CC treating pathogen infection in mammals, infections such as those caused  
 CC by CMV, HSV-1, HCV, KSHV, yellow fever virus, flavivirus or rhinovirus,  
 CC retroviral infections such as HIV-1, HIV-2, HTVL-3 and/or LAV, plasmodial  
 CC infections associated with P.faciparum, P.vivax, P.ovale, P.malariae. It  
 CC is also useful for treating cancer, especially prostate cancer

 PT Detecting target hepatitis GB virus nucleic acid in a test sample  
 PT suspected of containing HGBV comprises reacting the test sample the HGBV  
 PT polynucleotide probe and detecting the complex that contains target HGBV.  
 XX  
 PS Example 18; Col 549-550; 369pp; English.  
 XX  
 CC The present invention describe a method for detecting target hepatitis GB  
 CC virus (HGBV) nucleic acid (THN) in a test sample (T) suspected of  
 CC containing HGBV. The method involves reacting (T) with a HGBV  
 CC polynucleotide probe (I) containing 15 contiguous nucleotides, and which  
 CC selectively hybridises to the HGBV genome or its full complement, and  
 CC detecting the complex that contains THN, indicating the presence of  
 CC target HGBV. The method is used for detecting target HGBV nucleic acid in  
 CC the test sample suspected of containing HGBV and for characterisation of  
 CC newly ascertained etiological agent of non-A, non-B, non-C, non-D and non  
 CC -E hepatitis causing agents collectively termed as hepatitis GB virus.  
 CC AAA55270 to AAA55489 and AAB08985 to AAB09480 represent nucleotide and  
 CC protein sequences used in the exemplification of the present invention.  
 CC (Updated on 06-AUG-2003 to correct OS field.)

PT Analyzing a sample polynucleotide for detecting single nucleotide

PT polymorphism by rolling circle amplification.

XX

PS Example 29; Page 105; 126pp; English.

XX

CC The invention relates to methods for sensitively detecting the presence  
CC of a particular nucleic acid in a sample, e.g., determining whether a  
CC sequence of interest contains a particular genetic event such as a single  
CC nucleotide polymorphism (SNP). The sample nucleotide to be analysed is  
CC contacted with a single-stranded circular template comprising at least  
CC one copy of a nucleotide sequence complementary to the sample sequence  
CC and a type 2S restriction enzyme recognition site containing one or more  
CC modified bases. The circular template is combined with nucleotide  
CC triphosphates, a polymerase and optionally, a TRCA (thermophilic rolling  
CC circle amplification) primer to yield a single stranded multimer  
CC complementary in sequence to the circular template. A cleavage probe is  
CC then added, which anneals to the type 2S restriction recognition sites in  
CC the multimer and circular template, creating double stranded restriction  
CC sites. On treatment with the appropriate enzyme, the multimer is cleaved  
CC at the restriction sites, while the circular template is less sensitive  
CC to cleavage, due to the presence of the modified base(s) in the

CC restriction site. The fragments produced can then be detected using an  
 CC array of capture probes immobilised on a matrix. The method is useful for  
 CC analysing nucleotide sequences in order to detect a genetic event such as  
 CC a SNP. The method is sensitive and specific for detecting the target  
 CC nucleotide sequence. The present sequence represents a fluorescent  
 CC donor/quencher-labelled protein kinase C (PKC) alpha substrate used in an  
 CC exemplification of the invention in the detection of thiol (SH)-labelled  
 CC oligonucleotides. The SH-labelled oligonucleotide is contacted with PKC-  
 CC alpha, and a disulphide bond is allowed to form between the  
 CC oligonucleotide and the PKC-alpha. The activity of the PKC-alpha is then  
 CC detected using this sequence

PT Composition containing cationic protein or peptide and buffer, used to  
 PT treat or prevent infections, inflammation and tumors, e.g. Candida.  
 XX  
 PS Claim 3; Page 43; 90pp; English.  
 XX  
 CC AAY54468-95 represent exemplary polycationic peptides which are used in  
 CC medicaments for treating and preventing infections (by bacteria, fungi,  
 CC viruses), inflammation and tumors. For peptides AAY54483-86, a peptide  
 CC comprising one of these sequences is used. Polycationic peptides may be  
 CC derived from human or bovine lactoferrin (preferred), lactoferricin, or  
 CC conalbumin (ovotransferrin), as well as alpha or beta defensins,  
 CC magainins, cecropins type A or B, protegrins, indolicidin analogues, and  
 CC polycations isolatable from insects and histones. The medicament  
 CC comprises a buffer which maintains a preselected pH in treated tissue.  
 CC The buffer provides a tissue pH at which growth of Candida is reduced.  
 CC The peptides show a synergistic effect when combined with known  
 CC antimicrobials, so allow a reduction in the dose of such compounds. The  
 CC medicaments are used to treat and/or prevent infections, inflammation and  
 CC tumors, or when used with separately administered antibacterial,  
 CC antiviral or antifungal agents, to provide a synergistic effect,  
 CC especially for treating candidiasis, e.g. in patients with acquired  
 CC immune deficiency syndrome

 PT Fusion molecules comprising protein transduction domains and therapeutic  
 PT agents, useful for treating e.g. Alzheimer's and Parkinson's diseases,  
 PT dementia and epilepsy.  
 XX  
 PS Claim 36; Page 147; 191pp; English.  
 XX  
 CC The invention relates to a novel fusion molecule comprising at least one  
 CC protein transduction domain (PTD) and at least one linked molecule, where  
 CC the linked molecule has therapeutic or prophylactic activity against a  
 CC medical condition. The invention also relates to methods of drug  
 CC discovery in which the test compound is linked to a suitable transducing  
 CC protein and introduced to a cell; a method of killing resistant  
 CC microorganisms using a suitable fusion molecule; a mammal comprising a  
 CC covalently linked fusion molecule; and a mammal adapted for experimental  
 CC use in which at least one transduction molecule has been transduced into  
 CC essentially all the cells of the mammal. The fusion molecule is used to  
 CC deliver a therapeutic agent to a mammal, especially a human. The linked  
 CC molecule may be a vaccine, an anti-infective drug, a cardiovascular drug,  
 CC an antitumour drug, an analgesic, an antiinflammatory, a diagnostic  
 CC marker or a drug for the treatment or prevention of a central or  
 CC peripheral nervous system disorder. The central nervous system (CNS)  
 CC disorder is especially Alzheimer's disease, Parkinson's disease,  
 CC Huntington's disease, and also includes pre-senile dementia, epilepsy and  
 CC seizures, compulsive behaviour, meningitis (including viral and bacterial  
 CC meningitis), encephalitis, ischaemia, scrapie (or related spongiform  
 CC encephalopathies), dyslexia, age-related memory loss or Lou Gehring's  
 CC disease. Fusion molecules can also be used to kill virally infected  
 CC cells, especially those infected with HIV. The vaccines are used to treat  
 CC or prevent bacterial or viral infections. The methods are a highly  
 CC effective means for transducing a molecule into an entire mammal or into  
 CC specific cells, tissues, organs and systems within it. They also overcome  
 CC bioavailability problems that are associated with many therapeutic agents  
 CC (e.g., large molecular size, hydrophobicity, hydrophilicity, biological  
 CC resistance), by providing efficient transduction of the target cell. The  
 CC present sequence represents a specifically claimed protein transduction  
 CC domain

PT A modified peptide and a reactive group which is reactive with amino  
PT groups, hydroxyl groups, or thiol groups on blood components to form  
PT stable covalent bonds useful for treatment of viral infections, e.g.  
PT human immunodeficiency virus.  
XX  
PS Disclosure; Page 150; 211pp; English.  
XX  
CC The present invention describes a modified anti-viral peptide (I)  
CC comprising a peptide that exhibits anti-viral activity and a reactive  
CC group which is reactive with amino groups, hydroxyl groups, or thiol  
CC groups on blood components to form stable covalent bonds. (I) has anti-  
CC viral and anti-fusogenic activities. (I) inhibits viral infection of  
CC cells by inhibiting cell-cell fusion or free virus infection or to reduce  
CC the level of membrane fusion events between two or more entities, e.g.,  
CC virus-cell or cell-cell, relative to the level of membrane fusion that  
CC occurs in the absence of the peptide. (I) is useful in the treatment of  
CC patients who are suffering from viral infection, e.g. HIV, RSV, HPIV,  
CC MeV, and SIV. (I) may be administered prophylactically to previously  
CC uninfected individuals. This is useful in cases where an individual has  
CC been subjected to a high risk of exposure to a virus. By bonding of long-  
CC lived components of the blood, such as immunoglobulin, serum albumin, red  
CC blood cells and platelets the activity is extended for days to weeks.  
CC This is due to improved stability in vivo and a reduced susceptibility to  
CC peptidase or protease degradation. This minimises the need for more  
CC frequent, or even continual, administration of the peptides. AAB54784 to  
CC AAB55431 represent peptides used in the exemplification of the present  
CC invention

 PT Using site-specific DNA recombinase domain/protein transduction domain  
 PT fusion proteins for inducing target gene alterations in organisms or cell  
 PT cultures.  
 XX  
 PS Claim 5; Page 71; 85pp; English.  
 XX  
 CC The present invention relates to use of fusion proteins comprising a site  
 CC -specific DNA recombinase domain e.g. Cre and a protein transduction  
 CC domain (PTD) e.g. the Human immunodeficiency virus (HIV) derived TAT  
 CC peptide, for preparing an agent for inducing target gene alterations in a  
 CC living organism or cell culture. The present invention also provides a  
 CC method for inducing gene alterations in living organisms using the fusion  
 CC proteins of the invention. The present sequence is a HIV TAT mutant  
 CC peptide

 PT New ERA binding domain polypeptides and polynucleotides encoding them,  
 PT useful as research reagents and materials for discovery of treatments and  
 PT diagnostics for diseases, or for genetic immunization.  
 XX  
 PS Claim 1; Page 36; 279pp; English.  
 XX  
 CC The present invention relates to ERA binding domain polypeptides  
 CC (AAG99559-AAG99989 and AAM00010-AAM00021). The era gene in Escherichia  
 CC coli codes for an essential GTPase protein able to autophosphorylate at  
 CC serine and/or threonine residues. The protein has potential antimicrobial  
 CC and antibacterial activity and is useful in screening for antagonists,  
 CC agonists and for compounds with antibiotic activity. The proteins are  
 CC also useful in determining their role in pathogenesis of infection,  
 CC dysfunction and disease and could be used as part of a vaccine and/or  
 CC peptide therapy

 PT New isolated nucleic acid detection reagent for detecting 1000 or more  
 PT genes from Drosophila and for elucidating cell signaling and cell-cell  
 PT interactions.  
 XX  
 PS Disclosure; SEQ ID NO 4716; 21pp + Sequence Listing; English.  
 XX  
 CC The invention relates to an isolated nucleic acid detection reagent  
 CC capable of detecting 1000 or more genes from Drosophila. The invention is  
 CC useful in developmental biology and in elucidating cell signalling and  
 CC cell-cell interactions in higher eukaryotes for the development of  
 CC insecticides, therapeutics and pharmaceutical drugs. The invention  
 CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA  
 CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-  
 CC ABB72072). The sequence data for this patent did not form part of the  
 CC printed specification, but was obtained in electronic format directly  
 CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

A44755

20alpha-hydroxysteroid dehydrogenase (EC 1.1.1.149) - Clostridium scindens (fragment)

C;Species: Clostridium scindens

C;Date: 12-Mar-1993 #sequence\_revision 12-Mar-1993 #text\_change 17-Mar-1999

C;Accession: A44755

R;Krafft, A.E.; Hylemon, P.B.

J. Bacteriol. 171, 2925-2932, 1989

A;Title: Purification and characterization of a novel form of 20alpha-hydroxysteroid dehydrogenase from Clostridium scindens.

A;Reference number: A44755; MUID:89255043; PMID:2722736

A;Accession: A44755

A;Molecule type: protein

A;Residues: 1-11 <KRA>

C;Comment: This enzyme was purified to homogeneity and shown to have 20alpha-hydroxysteroid dehydrogenase activity in the presence of NADH or NADPH. The enzyme as purified lacked glyceraldehyde-3-phosphate dehydrogenase (GAPDH) activity although the fragment shows near identify to known GAPDH sequences.

YHBO

morphogenetic neuropeptide - bovine

C;Species: Bos primigenius taurus (cattle)

C;Date: 20-Jun-2000 #sequence\_revision 20-Jun-2000 #text\_change 20-Jun-2000

C;Accession: C01427; A01427

R;Bodenmuller, H.; Schaller, H.C.

Nature 293, 579-580, 1981

A;Title: Conserved amino acid sequence of a neuropeptide, the head activator, from coelenterates to humans.

A;Reference number: A93266; MUID:82035850; PMID:7290191

A;Accession: C01427

A;Molecule type: protein

A;Residues: 1-11 <BOD>

R;Birrr, C.; Zachmann, B.; Bodenmuller, H.; Schaller, H.C.

FEBS Lett. 131, 317-321, 1981

A;Title: Synthesis of a new neuropeptide, the head activator from hydra.

A;Reference number: A91296; MUID:82050803; PMID:7297679

A;Contents: annotation; synthesis

A;Note: the synthetic peptide was identical with the natural peptide in chemical structure and biological activity

C;Comment: This peptide was first isolated from nerve cells of hydra and was called head activator because it induced head-specific growth and differentiation in this animal. It has been found in mammalian intestine and hypothalamus.

C;Superfamily: unassigned animal peptides

C;Keywords: blocked amino end; growth factor; hormone; hypothalamus; intestine; neuropeptide

F;1/Modified site: blocked amino end (Gln) (probably pyrrolidone carboxylic acid) #status experimental

 RT active polypeptide of the skin of Physalaemus fuscumaculatus.";  
 RL Experientia 20:489-490(1964).  
 CC -!- FUNCTION: Tachykinins are active peptides which excite neurons,  
 CC evoke behavioral responses, are potent vasodilators and  
 CC secretagogues, and contract (directly or indirectly) many smooth  
 CC muscles.  
 CC -!- SUBCELLULAR LOCATION: Secreted.  
 CC -!- TISSUE SPECIFICITY: Skin.  
 CC -!- SIMILARITY: Belongs to the tachykinin family.
